

FocusScan RX II - Multi-Function Ultrasonic Inspection Systems

Features

- Powerful Analysis and Reporting Functions
- On-Board 2-axis Motor Control Drive Unit
- Import Setups from ESBeamTool[®]
- User Replaceable Batteries (hot swappable)
- Up to 64/128PR Phased Array
- Two 64 element IPEX Phased Array Connectors
- 2D Matrix and Dual Linear Array support
- 8 Independent Conventional Ultrasonic Channels
- 2 Axis Encoding, video tracking
- Simultaneous PA,ToFD and/or PE acquisition
- FMC/TFM
- Multi-channel/group data acquisition
- 128GB SSD Storage

Techniques

- Phased Array
- FMC/TFM
- TOFD
- Pulse Echo
- Corrosion Mapping
- Weld Zone Discrimination

Applications

- Pressure Vessels
- · Pipeline Girth Welds
- Composites
- Structural Welds
- Forgings & Castings
- Turbine Disks & Blades
- Aircraft Components
- Hydrogen Damage Surveys
- Corrosion Surveys
- HTHA Surveys
- General Flaw Detection

Software

- Phased Array/TFM
- TOFD
- Pulse Echo
- AWS
- Strip-Scan
- Long Range (Creeping Head Inspection Method corrosion detection)
- TD Super-View
- ESBeamTool[®] included

FocusScan RX II - Technical Specification

Hardware

16/128PR 16 Active, 128 Elements, 8 Conventional 32/128PR 32 Active, 128 Elements, 8 Conventional 64/128PR 64 Active, 128 Elements, 8 Conventional Number of Active Channels Up to 128 Number Of Focal Laws Up to 890 Dynamic Depth Focusing A/D Sampling Frequency Phased Array = 8Bit & 14Bit Conventional = 8Bit & 14Bit System Bandwidth(-3dB) Phased Array = 0.25MHz to 25MHzConventional = 0.25MHz to 25MHz

Max Pulse Repetition Frequency Variable up to 5KHz Pulser Delays

Output Impedance HT Pulse Shape Square wave Phased Array = 5 to 190V in 1V Steps HT Pulse Voltage Conventional = 5 to 190V in 1V steps HT Pulse Width Range

Rise/fall time

Receiver Delays 0μs to 20μs in 1ns steps 0 to 100dB in 0.1dB steps Gain Range Input Impedance 50 Ohms

Operation Dynamically optimises receive focus delays Range Of Operation User specified depth/range in mm or µs Performance 100MHz real-time

Number of Curves

Conventional - 1 per channel Phased Array - 1 per Focal Law A-Scan Points Per Channel 8000 samples per channel

Number Of Gates Per Channel 3 overlapping hardware Gates Gate Start/Width User definable in 40ns steps Gate Reference Points Transmit Pulse or Material Interface Echo Storage Modes Per Gate

0μs to 20μs in 2.5ns steps 6 Ohms 20ns to 500ns in 2.5ns steps

A-Scans, Peak Depth and Amplitude, Both

Number Of Channels All (128 software channels) Real-time averaging 2 - 256, user definable Averaging Rates

Peak Storage Modes

All Peaks, First Peak, Largest Peak/s, Loss of Signal, Between peaks 5 to 100% in 1% steps per hardware Gate Threshold Setup

Number Of Peaks Per Gate

Full matrix capture, Half matrix capture, Custom Data Acquisition mode Wave Propagation Any combination of T & L

Amplitude Fidelity Yes

Encoded TFM Yes TFM Data Saving Yes

TFM Modes Conventional, PWI, Virtual Source (Swept, Linear)

Input Type Encoder, Video Camera

Number of Axis 2 Axis

Encoder Interface TTL compatible, 5V @ 1A, 12V @ 0.4A

Video Input 1Vpp Composite Motor Drive 2 Axis (24v, 5 Amps)

Operating System Windows® 10

3rd Party Software ESBeamTool® (Eclipse Scientific)

Intel Atom E3845 Processor

Memory

Display Colour TFT (industrial type) 12.1" Display Resolution 1280 x 800 (Sunlight Readable Screen)

Storage 128GB SSD Ports

3 x USB 2.0 $1 \times 10/100/1000$ Ethernet,

GPIO

1 x Video

Unit Dimensions 370 x 294 x 114 (WxHxD) Weight 7.3kg (1 Battery) Rating Designed to IP66

Temperature -10°C to 40°C operating / -25°C to 85°C storage

Batteries 2 x Hot Swappable

DC Input

AC Input 90 to 260VAC @ 40Hz to 60Hz

Software

- Simultaneous Phased Array, TOFD, Pulse Echo and FMC/TFM data collection
- Operator definable weld geometry overlays
- Real-time A, B, C and D-Scan images, with user defined display modes
- On-Board report generation including interactive print-preview & user-definable report fields
- Full cursor analysis indicating peak depth, amplitude and x,y position Export Bitmap images to any Windows® application
- 8 or 14 bit Data acquiistion for Phased array, TOFD and Pulse Echo
- Import ESBeamTool® setups

- User configurable control of beam angle, focal distance and spot size
- Linear, Sectorial, Linear spread (Simple & Compound) and Single beam scans
- Dynamic Depth Focusing (DDF) provides a user-definable focal range Supports Linear, Dual Linear, 2D Matrix and Dual Matrix probe/wedge geometries
- Amplitude correction across sectorial scan angles or fixed angle focal laws Skip Correction provides correct depth/range relationship for multiple legs

- Integrated with TDScan
- Envelope processing
- Multi-channel/group data acquisition
- Multi-mode data processing (Conventional, PWI, Virtual Source Swept & Linear)
- Amplitude fidelity configurator

- Perform multi-channel TOFD, Phased Array, FMC/TFM and Pulse Echo inspections simultaneously
- Full suite of image analysis tools for defect/crack sizing
- Real-time multi-channel averaging significantly improves signal quality Linearisation, Straightening, SAFT, Parabolic cursors
- File utilities include file join/split, reverse, save partial, output data to text file etc

- Independent control of transmit and receive parameters
- C-scan with end/side views for corrosion mapping
- Trigger reference modes including Interface Echo or Tx Pulse
- Multiple peak data storage modes, including full/selective A-Scan storage

- Combined TOFD, Time/Amplitude view, Map, Couplant Check, Go/No-Go and Weld overlay views in a single pass
- Inspection data displayed as strip-charts indicating weld zones
- Integrated TOFD analysis
- Automated report generator with acceptance configurator
